

Easy Access Line

HUR®
HEALTH & FITNESS
EQUIPMENT

Endless possibilities

HUR - Because everybody is not the same

HUR's Easy Access Line is based on an open U-shaped design which allows independent training for wheelchair users, those with other mobility and special needs, as well as the non-disabled. The Easy Access Line is available with Smart Card option and with a separate and removable chair.

HUR's Easy Access Line equipment is suitable for all user groups.

HUR – tomorrow's gym technology

The Finnish company HUR, manufactures modern, highly technology strength equipment. The result of 15 years of scientific development is a unique, pneumatic based equipment line that is based on collaboration with different universities and leading physiology and biomechanics experts from around the world.

Natural Transmission

Natural Transmission is the core of HUR strength equipment. It is a pneumatic air resistance method, which makes HUR's strength equipment quiet, safe and efficient regardless of the user's strength level. HUR's high quality, versatile and carefully researched line of strength equipment is designed to serve all purposes – training, rehabilitation and is well suitable for senior citizens.

HUR's Easy Access Line equipment does not include fixed seats, so it is easy to train independently, in the safety and comfort of your own wheelchair.

The computerized Smart Card system is also available for HUR's Easy Access Line of equipment.

Easy Access FCM Line

HUR's Smart Card function is also available for Easy Access Line equipment

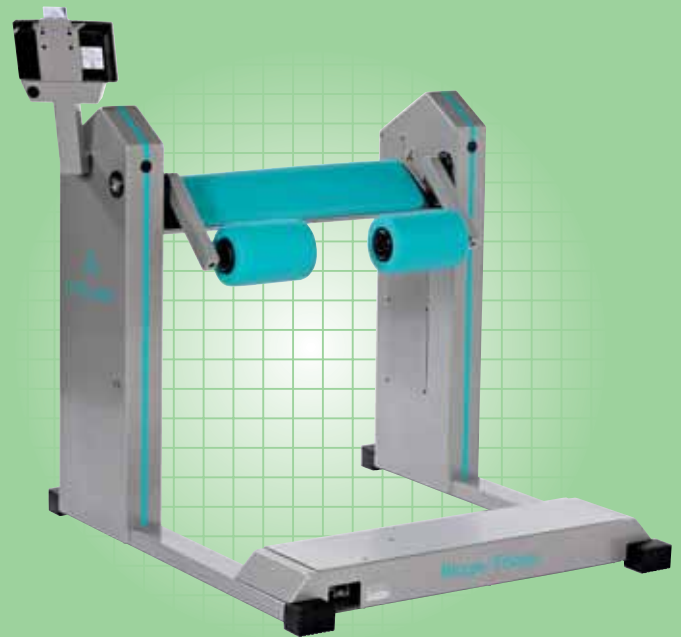

HUR's Smart Card system represents the most developed technology in the strength equipment industry. The Smart Card functions make it very easy to use and to monitor the training program. The system automatically adjusts resistance, counts repetitions, assists the user and saves each training session. The Smart Card adds true value, however all HUR equipment is available without this option.

The Smart Card function is also available for HUR's Easy Access Line of equipment. It is now easier than ever to build a modern fitness center free of barriers and suitable for all users!
