

THE LIGHTSPEED ADVANTAGE

MAGIC SHORTS

Our shorts are designed and tested to stand up to the toughest workouts. They provide comfortable mobility with a breathable moisture wicking material. Durable medical grade hooked Velcro secure our LightSpeed side panels, keeping you firmly attached to our patented "lift from the hip" technology, even while running at a fast pace. Our shorts have 4-inch elastic webbing to ensure a good the fit and keep them secure. They are designed specifically for LightSpeed yet are comfortable enough for Yoga, HIIT or other performance activities.

Machine washable, dry on low heat.

XS 28–30" **S** 31–33" **M** 34–36" **L** 36–39" **XL** 39–42" **XX** 43–46" (Waist in inches)

LIGHTSPEED LIFT STRAPS

LightSpeed Lift straps are designed to work together with our Magic Shorts. They have a fully stitched biasing cord that attaches to a climbing grade carabiner. We use only medical grade hooked nylon that is carefully stitched onto industrial grade webbing that attaches to the loop nylon on the Magic Shorts.

Lift Straps are guaranteed for one year of normal use.

LightSpeed Lift Belt

Our lift belt system is designed to attach the Triplaner directly over street clothing. The lift belt fits users with a 20" waist up to a 60" waist. The attachment is secure, stable, and comfortable. Our Lift is held in proper alignment by specially sewn elastic webbing that fits in two locations around the thigh. Each lift belt comes with 3 sets of thigh straps sized to accommodate legs from small to XXXL. Our thigh straps can be removed for washing or to further customize the fit.

Machine washable, air dry recommended. LightSpeed Lift Belt is guaranteed for one year.

Super Lift Belt

The LightSpeed Lift super belt takes the same concept as the universal lift belt and adds a second bungee cord. Doubling the cords adds about 30% effectiveness to the universal lift belt. So far, we have found the following benefits:

- Added support in the belt allows for more stable positioning within a LightSpeed Lift frame. This has been useful in rehabilitation from major surgeries, traumatic accidents, and performance.
- Rehabilitation requires more weight to be taken off, and a more robust lift is needed to increase user's comfort. More weight can be taken off with the crossbar in a lower position and also allows for greater visibility.
- Clients report higher confidence and security when using LightSpeed Lift's super belt early in the rehabilitation process.

Thigh Straps

Our thigh straps are amazingly durable, but let's face it, materials start to get fatigued after lots of use and washings, so that's why we offer replacement straps.
